SUMMARY: Tells of the life and work of the Flemish painter Peter Paul Rubens. Explains that his paintings reveal the ambitions of the ruling class and the renewed confidence of the church, rather than the problems of the common people. Points out that his works were produced by means of a workshop system, where trained assistants would do most of the painting and Rubens would add the finishing touches. Shows examples of his works, such as Descent from the cross, Judgment of Paris, La kermesse, and others.

Series RC circuits (*Motion picture*) Animated Electronics Films, 1967.

4 min. si. color. super 8 mm. (Electronic circuit theory series)
Loop film mounted in cartridge.
With narrative guide and animation model.
Summary: Uses animation to show seven successive cycles of operation in a typical series combination of resistance and capacitance, presenting each cycle with a different set of values of the two components. Points out that the circuit current leads the voltage in phase by amounts that vary from zero degrees in the first instance to a full quarter-cycle in the last example. With subtitles.

Series RL circuits (*Motion picture*) Animated Electronics Films, 1967.

4 min. si. color. super 8 mm. (Electronic circuit theory series)
Loop film mounted in cartridge.
With narrative guide and animation model.
Summary: Presents in animation seven examples of combinations of resistance and inductance, in series with an AC generator, so that the current in the line in each example lags the generator voltage by a different number of degrees in phase. Traces out rotating vectors and the resulting sine waves and shows meter movements. With subtitles.

Series RLC circuits, part 1 (*Motion picture*) Animated Electronics Films, 1968.

4 min si. color. super 8 mm. (Electronic circuit theory series)
Loop film mounted in cartridge.
With narrative guide and animation model.
Summary: Shows in a series of incremental changes how the values and phase relationships of current and voltage are affected as the frequency is changed from below to above resonance in a typical series RLC circuit. With subtitles.

Series RLC circuits, part 2 (*Motion picture*) Animated Electronics Films, 1968.

4 min. si. color. super 8 mm. (Electronic circuit theory series)
Loop film mounted in cartridge.
With narrative guide and animation model.
Summary: Shows how the frequency of the rotating generator is gradually raised from a very low value to a very high value and the conventional graphical relationships between inductive reactance, capacitive reactance, and impedance are simultaneously traced out for the entire frequency band. Also traces out the current amplitude curves and the circuit phase angle curve.
